

How to set-up your **Sound Shocker.**

The first time you use **Sound Shocker** you should follow the **FINE TUNING PROCESS.**

“Directions? I don’t need no stinking directions!” please use Quick Start:

Quick Start.

Since most portable players seem to work best at about $\frac{3}{4}$ volume (75%), set the volume on your player to about 75% and simply plug-and-play. This will typically be a good setting, however you may want to fine tune the volume by adjusting the volume on both your player and stereo.

FINE TUNING PROCESS.

1. Adjust the volume of your stereo to whatever you consider your “normal” listening level using a CD or FM radio.
2. Connect **Sound Shocker** to your portable player.
3. Reduce the volume of your player to minimum.
4. Connect **Sound Shocker** to your stereo and select the AUX input.
5. Start playing music on your player and increase the volume of the player until you’ve reached your “normal” listening level.
