Need to boost the volume out of your mp3 player?

Tired of getting blasted out of your car or living room every time you unplug from your stereo?

Do you have to set your volume to MAX and even then it's just not enough?

Sound Shocker will boost the output of your player to more closely match the rest of your stereo. It couldn't be easier, simply connect Sound Shocker between your player and the stereo. That's it, no switches to forget, no batteries, no adjustments, just clear, clean sound.

Put life back into your music and make listening a pleasure once again.

Sound Shocker will only work with your car / home stereo through the AUX input.

NOT FOR USE WITH HEADPHONES.
